I hope that you, the FCC will support Satellite radio against the NAB and their attempt to silence this new industry. I do not support NAB and there attempt to stop Satellite Radio from offering traffic and weather and any other programs that benefit the listening public. I can find out traffic and weather conditions across the state and the country before I leave my house. I can get instant updates anytime that I want. With regular AM and FM broadcast I have to change station at least three or four times because of reception when I am driving just 50 or 60 miles from home. With Satellite radio, I have one station that I can listen to all across the country and check traffic and weather when I need the information. Until NAB and their broadcasting stations can offer the same thing I will continue to support Satellite radio. Sincerely Raymond Oeverndiek
